It is over one year since we moved from Covent Garden to Kings Cross, the move has proved very successful for TK one.

Kings Cross is centrally located and the prestigious redevelopment scheme offers cafes, bars & restaurants with pleasant piazza's & walks.

We have taken on much more space and purpose built the facility to house our Digital Vision Golden Eye III 2K scanner along with the Spirit HD datacine & Ursa Diamond telecine suites.

These suites are supported by our DVS Venice encoding/transcoding platform. Along with our current tape to file or tape suites and legacy format bays all supported by our 72TB SAN system.

Fully equipped film preparation and cleaning department, for physical repairs, as well as ultra-sonic cleaning.

We handle all film gauges and most video-tape formats.

Recent projects include the digitization of Imperial War Museums First World War collection, & F.I.F.A.'s entire archive both to 2K and HD plus low res files.

We have serviced many of the WWI anniversary documentaries plus a full slate of factual programmes & documentaries.

If you have a project to discuss whether large or small please contact TK one where our fully experienced team will be delighted to assist you.
